WinAir Essentials - Aircraft Maintenance and Inventory Tracking Solution

London, Ontario, Canada - January 29, 2009 - While simple in design, WinAir Essentials is a powerful system that provides all of the data management that a growing maintenance department needs to stay in compliance with government regulations, report on maintenance costs, and track and control inventory.

Competitively priced and available for outright purchase, WinAir Essentials introduces you to the WinAir Series without breaking your budget.

WinAir Essentials Features:

As with each edition within the WinAir Series, AV-Base designed WinAir Essentials with integrated inventory and maintenance management systems that include many powerful and flexible features:

- * Real-time management of rotables and consumables
- * Inventory tracking and purchasing
- * One inventory with unlimited user defined classifications
- * Detailed inventory including notes, alternates, quantity, location, vendor, and cost of current stock and past transactions, historical details of parts used and invoiced, and parts currently on order, etc.
- * Aircraft invoicing
- * Vendor and customer card files
- * Component repair tracking
- * Master part definitions which include unlimited notes
- * Unlimited alternate part numbers for each master part
- * Repair Orders by vendor, PN, SN, Repair Order Number, etc.
- * Work orders and Job Cards
- * Invoicing for Work Orders
- * Detailed cost reporting by aircraft or job
- * Extensive inventory and maintenance reporting options
- * Customized security levels

Maintenance Programs

Module:

Depending on your operation's needs, you may select either a basic system or a full package that also includes a Maintenance Programs module. Both systems provide seamlessly integrated inventory and maintenance production control; while the optional module adds the following features:

- * Maintenance tracking and forecasting for up to ten aircraft
- * Maintenance Schedule Templates to define the maintenance requirements of controlled aircraft including inspections, components, Airworthiness Directives and Service Bulletins

- * Automatic generation of Workorder Tasks from the Maintenance Scheduling system
- * Point-and-click options for installing or removing components
- * Future Maintenance Forecast and Aircraft Compliance reports

Seamless Upgrading:

As each edition within the WinAir Series has been designed with the same data and workflow standards, you have the option of upgrading from WinAir Essentials to a more full-featured product in response to the growing needs of your operation. Upgrading to WinAir Express or WinAir Pro-SQL is seamless and requires minimal training.
